ORNMS – Release Notes

Software Version: **2.2.14 build (20220619)**

New Features & Enhancements

1. Node View
   a. Node Availability / Run-Time %: Display of node availability over the period – default is last one month. Onclick of RunTime field, one can select customized start and end date.
2. Topology
   a. Display of System Name for a node in map view
   b. Option to show/hide system name
   c. Search for a node with system name/IP Address
3. Analytics
   a. Pie Chart to display SU devices based on SU service (provision) status
4. Settings
   a. Search box functionality is implemented
5. Max entry count in a page is increased to 500

Bugs Fixed

1	Fixed navigation to switch view in Topology
2	Fixed node count issue in dashboard
3	Fixed scope related issue in dashboard
4	Fixed issue during search in different sections
5	Fixed issue of rescan in Topology
6	Fixed issue of duplicate system name displays in map view Topology

Known Issues

1	Delay in topology view when selecting new devices
2	Sorting functionality not available for Latitude and Longitude fields in inventory view
3	If Lat, Long are not present for AP, SU representation in Node view may not be accurate
4	Invalid device count on changing the scope in inventory view
5	When reset is performed with retain IP checked, device resets to default IP
6	Pagination doesn't stop even after end of data entries
